

Annex A North Hawai`i District

A1 INTRODUCTION

A1.1 The ARES Emergency Response Plan for Hawai'i County provides a written guideline of basic information that would be needed in a communications emergency. This annex provides additional information specific to the North Hawai'i district.

A1.2 The organizational chart for the North Hawai'i ARES district appears below.

A2 FREQUENCIES

- **A2.1** Any member of the North Hawai`i ARES team, who suspects a communications emergency may exist, should monitor the primary HF and VHF frequencies from his or her home, mobile, and/or portable station for information, instruction, and assignment. See the frequency assignment chart below.
- **A2.2** The first ARES member to arrive at the scene of an event or incident should initiate an operations net on 146.52 MHz. Subsequent ARES members should announce their presence on this net upon arrival at the site. While at the site, all ARES members should monitor 146.52 MHz at all times in order to coordinate ARES team activities.
- **A2.3** A cross-band repeater will be set up at the site when it is necessary to coordinate local operations with county-wide or state-wide operations for an extended period of time. The use of cross-band repeaters allows hand-held radios to communicate over long distances using lower power than would otherwise be possible. This conserves battery life for the hand-held radios and redirects traffic away from the local operations net being conducted on 146.52 MHz.
